Addiction Help Needed?

Imagine addressing your cravings,
anxiety, and depression.

We can help!

with NAD + AMINO ACIDS THERAPY.

Why is opiate addiction hard to treat?

Opioids bind to receptors in the brain, which result in an intoxicating, stimulating, feeling. While this is effective in relieving pain, it also stimulates the release of dopamine in the brain known as the reward center of the brain. The intoxication feeling of the opiates and the release of dopamine causes the want and spur the victim to continue using, magnifying a never-ending cycle.

What is NAD+ amino acids?

NAD stands for Nicotinamide Adenine Dinucleotide. It is a coenzyme which means it's a "helper" molecule that binds to a protein molecule in order to activate an enzyme. Enzymes are responsible for over 5,000 different biochemical reactions throughout the body.

NAD+ amino acids participates in more reactions than any other vitamin-derived molecule and is essentially the building block of a healthy body. It is this building block that the brain, our internal organs and our neurological systems need to function at optimal efficiency.

How does NAD+ amino acids work?

NAD+ amino acids therapy involves a high dose IV infusion that goes directly into the bloodstream. NAD+ amino acids works rapidly to repair cells throughout the body and within the neurons in the brain. Cells produce more energy, DNA is repaired and many other functions throughout the body and brain are optimized. Addiction depletes NAD levels. A significant increase in NAD levels helps to restore brain functionality. As a result, this innovative and alternative treatment helps patients experience an increased clarity of mind, better problem-solving ability, improved focus and concentration, increased energy, improvement in mood, decreased anxiety levels, and reduced cravings for drugs and alcohol.

Who we are and what we do?

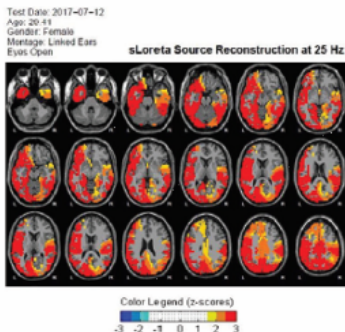

We are a medical clinic who provides an all-natural treatment for those who wish to break the tortuous bonds of drug and alcohol dependence. We have significant experience in delivering NAD+ amino acids therapy to a wide range of patients from all over the country. The Emerald Neuro-Recover doctors, nurses, and therapy management professionals provide the best possible care and treatment. We are located in Carmel, Indiana, just north of Indianapolis- in a safe, modern and comfortable environment.

How NAD+ amino acids therapy works to normalize the brain for those suffering from alcohol and drug dependence.

The Quantitative EEG "Brain Map" is an extensive non-invasive test which gives a clear picture of how a brain functions as compared to a "normal" brain. With it we can zero in on areas of your brain that are either OVER functioning, or UNDER functioning. Abnormal brain wave patterns can be visualized in real time to reveal problematic areas of your brain.

This 29 year old female's brain is suffering from alcoholism with cravings and anxiety to drink just to not feel sick. Her drinking started in the morning. Her scan shows her brain is hyperactive and overactive.

RED= HYPERACTIVE and OVERACTIVE

GRAY=NORMALIZED ACTIVITY of serotonin and dopamine. The brain is more calm after 12 days of NAD+ Amino Acids Therapy.

This is the after brain scan on the same patient. The results are quite impressive in that it shows the calming effect of the treatment. The brain has returned to a normal state and the patient feels much more at ease.

Contact us today for a free consultation.

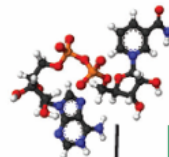

Will the treatment last?

Patients can expect the positive effects of neuro recover treatment to be long-lasting provided the patient refrains from using alcohol and drugs again. During and after the IV treatment, patients will be provided continued support with an oral program supplement to support continued brain balancing.

What happens after and during treatment for addiction?

After treatment at Emerald, the patient typically no longer suffers from the physical symptoms of addiction. Now the patient can start to travel on the road of recovery. On their road of recovery the NAD + amino acids therapy is a important tool needed. But on the road of recovery other tools are needed too. A variety of tools for aftercare, depending on the person. We want to discuss best options of other tools for you and make personalized referrals for the following:

- 12-step program
- Individual, group or family psychotherapy
- Life Coaching
- Nutrition
- Exercise
- Residential and/or Intensive Outpatient Programs

Testimonials

The very best testimonial for NAD + amino acids therapy comes from those whose lives have been changed by the treatment at Emerald.

.....
 "By day 10, I felt like a brand new person. I know it's hard to understand, but after 10 days: my anxiety was minimum to none, my depression was gone, my thoughts and my compulsions about using were gone. I feel like I've been clean for years. I haven't even had the thought about using. It feels foreign to me now which is a hard concept for me to grasp, but I feel so blessed to have my life back. - **Greg Holman, 1st Patient (now has 29 months sobriety as of August, 2018)**

.....
 "After going through the treatment of NAD I feel like I felt before I started using, and I didn't think that I would ever feel that way again." - **Wes Martin, 4th Patient**

.....
 Before I came into Emerald, I was an abuser of not just one drug but multiple drugs. In March, I was downtown and tried to walk away from an altercation my friend was in. As I was walking away, I was struck in the back of the head. I was knocked unconscious. They cracked my head, broke the back of my skull, broke my jaw, and bruised the right side of my brain. I had two places in my brain which were bleeding.

My mother saw on the news about the NAD TREATMENT and recommended it to me. At that point I was very desperate because my brain was in a lot of pain. I could not go more than four hours without a painkiller. I told my mom I was ready to try anything.

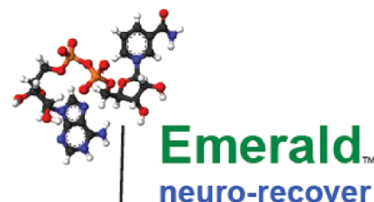

After the first day I felt no need for a painkiller. I did not feel any withdrawal from the painkillers. Before my NAD treatment I had taken 120 painkillers, after the first day there was no need for painkillers and the constant pain in my head was no longer present.

After day 5 or 6 days my brain started feeling real sharp. I would tell someone to give me a math problem so I see how fast I could get it done. After 10 days my brain felt like it did before I ever did drugs or the concussion occurred. NAD REALLY REALLY MADE A HUGE DIFFERENCE IN MY LIFE.

- **Cameron Chamblor, 48th Patient**

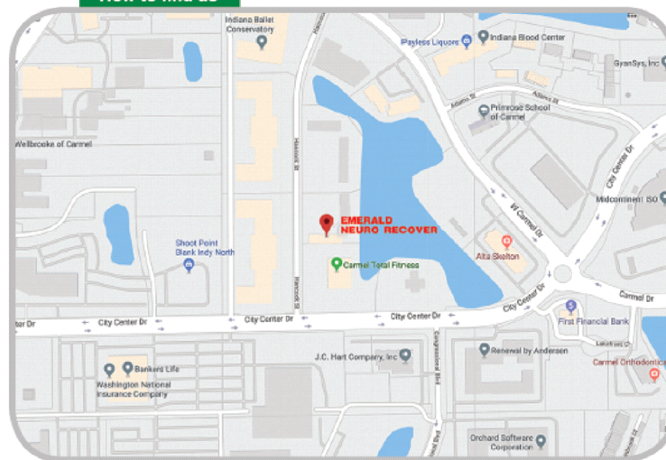

.....
 I have my child back. That is the greatest thing in the world. I have my daughter back the way she was before all this happened. - **Terri Gerdt, Alex's Mother 40th Patient**

.....
 NAD Treatment has saved my life. I abused Adderall. I would stay up for four days and then crash; I did that for years. I was not able to physically handle anything. I would not be alive if I did not do the NAD treatment. I would either be dead or still in that horrible, horrible, cycle. - **R. S., 90th Patient**
